

I want to let you know that XM satellite radio is beneficial in many ways, the traffic and weather is always and instantly (not occasionally as with most radio stations) available when I need it. Also the programming on satellite radio is far superior to conventional radio, every genre, every era, every type of music and talk radio is right at my fingertips and it is MY choice not the stuff that corporate radio feeds to me on most commercial radio stations. I have a right to listen to whatever type of entertainment that I wish to listen to and I pay for that right. The National Association of broadcasters does not pay for my XM satellite radio, I do. Therefore it is MY CHOICE, not theirs.
